# **Testrapport CirculairNLP**

# by Axel Frederiks (2202630) Jonah Siemers (2202907) Menno Rompelberg (2204333) Oscar Theelen (2204154)

19/04/2024

#### **Supervisors**

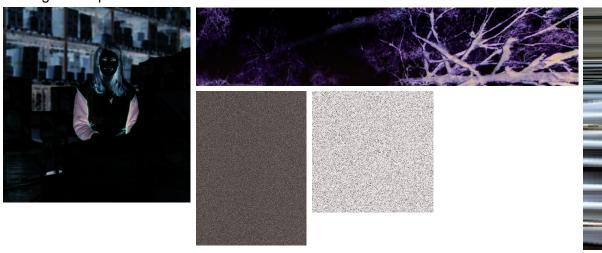

Pascal Slaats Jeroen Baijens Shannen Dolls Voor het testen hebben we 6 pdf documenten gebruikt voor de volledige tests. Van deze documenten zijn er 4 aangeleverd door de opdrachtgever.

## 1 File Data Extraction

## 1.1 Images

Files	# images extracted	# images garbage	# correct
Allianz	0	0	-
СМА	170	57	33.5%
EFRAG	49	49¹	0%
DPEF	75	33	44%
VDL	38	4	10.5%
NASDAQ	167	146	87.4%

#### Garbage examples:

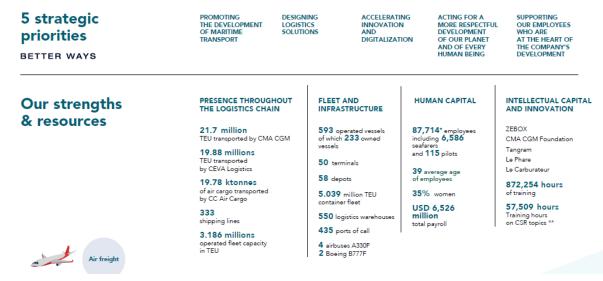

<sup>&</sup>lt;sup>1</sup> 44 van de 49 corrupted images zijn onleesbaar, omdat het .jpx-files zijn.

## 1.2 Tabellen

Tabellen werken met OCR en hebben dus een grote error marge.

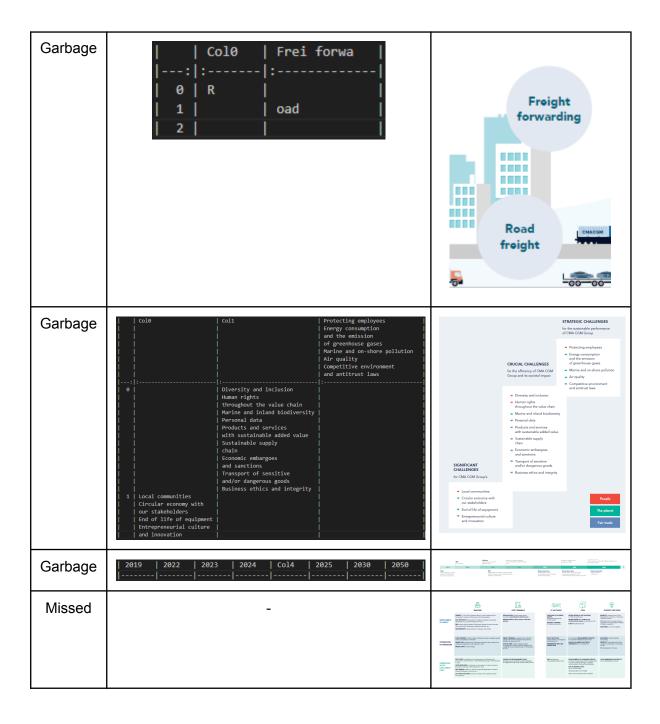

Tabellen hebben geen eenduidige definitie. Om die reden worden alleen tabellen die duidelijk tabellen horen te zijn geteld onder wanted tables. Het volgende wordt bijvoorbeeld niet geteld als tabel:

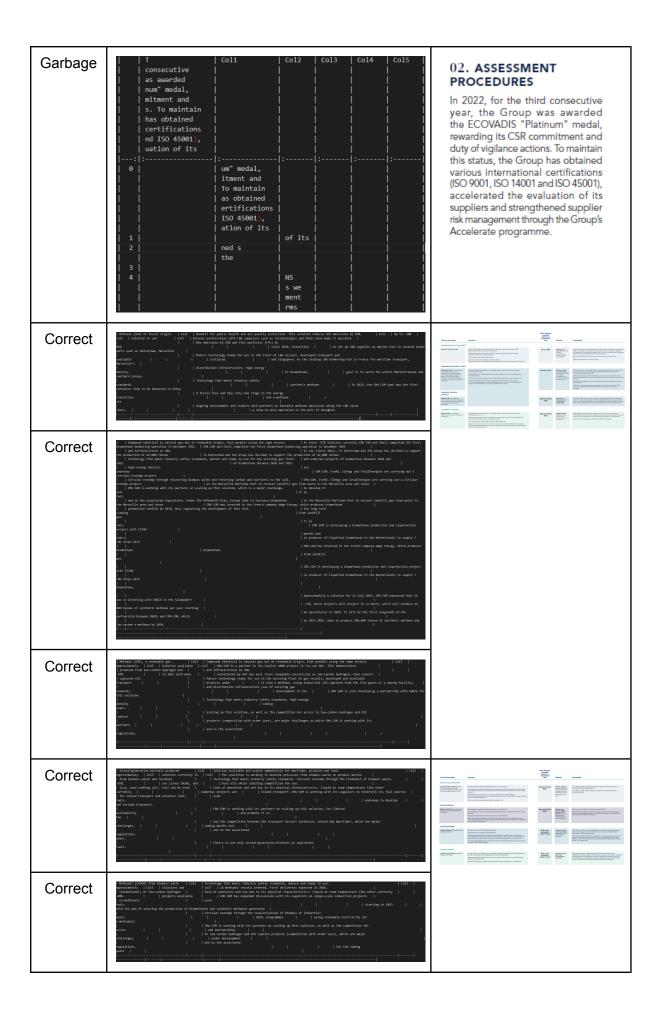

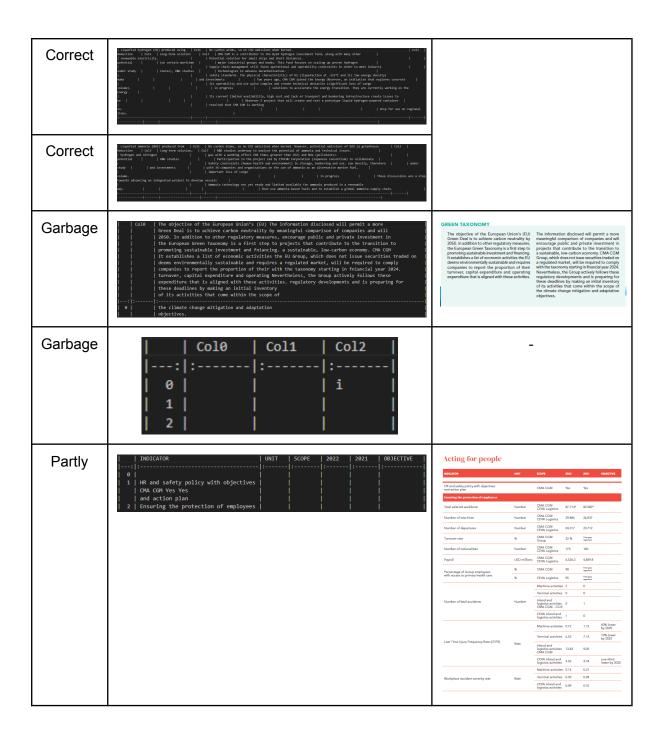

Voor deze test is alleen CMA handmatig gecontroleerd aangezien dit bestand al 2 uur duurde.

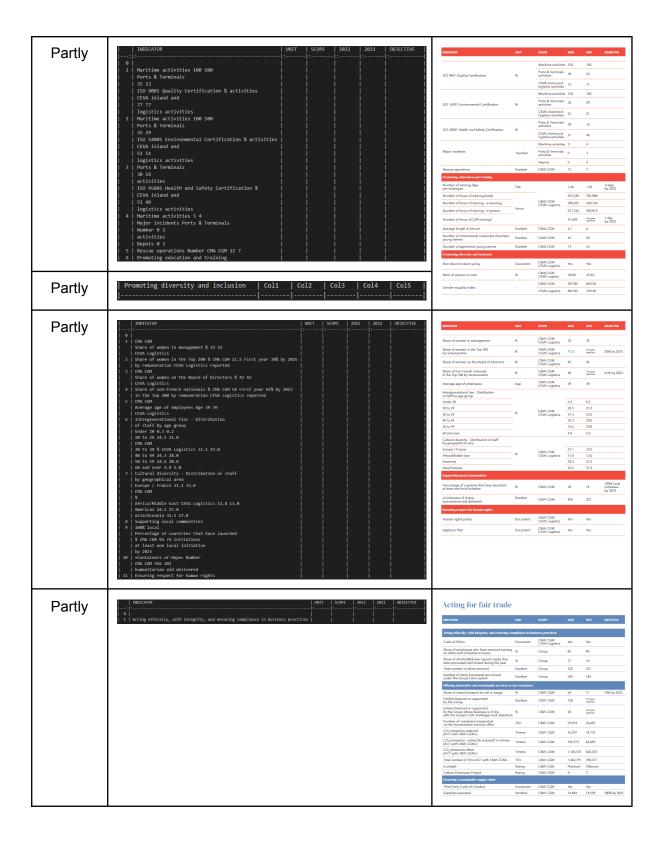

Files	gemiste tabellen	slechte tabellen	correcte tabellen	deels correcte tabellen
CMA	3	6	7	8

#### CMA:

## 2 File Data Storage

## 2.1 Tijd prestaties

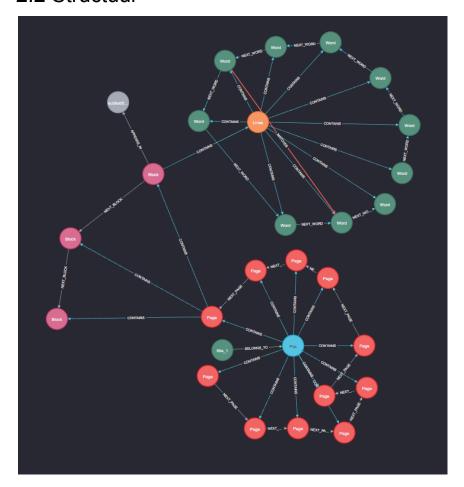

Files	verstreken t in (s)	# pagina's	Gemiddelde t per pagina (s)
Allianz (2018)	51.28	11	4.66
CMA	1290.33	83	15.55
EFRAG	1811.18	78	23,22
DPEF	1306.75	41	31,85

Er is te zien dat de runtime van de neo4j upload per pagina varieert van bestand tot bestand, dit is zeer afhankelijk van hoeveel inhoud er staat op de desbetreffende pagina. Alle bestanddelen van een pagina worden namelijk ook nog met elkaar vergeleken om connecties te leggen.

Gemiddelde tijd per pagina: 18,82 seconden, dit getal zegt een stuk minder dan de stijgende waarden in de tabel waaruit is af te leiden dat de prestaties van de neo4j database achteruitgaan als het aantal nodes toeneemt. Het toenemen van het aantal nodes in de database heeft de grootste impact op hoe lang het gemiddeld duurt om een pagina in de database te zetten.

Het structurize gedeelte gaat aanzienlijk sneller dan het aanvankelijk uploaden van de data, maar ook deze hangt zwaar af van de hoeveelheid data.

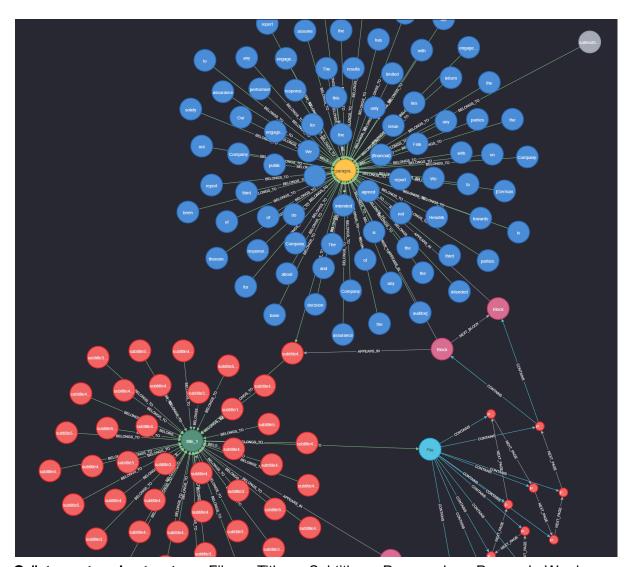

## 2.2 Structuur

De absolute structuur loopt als volgt:

**Absolute structuur:** File > nPage > nBlock > Lines > nWord

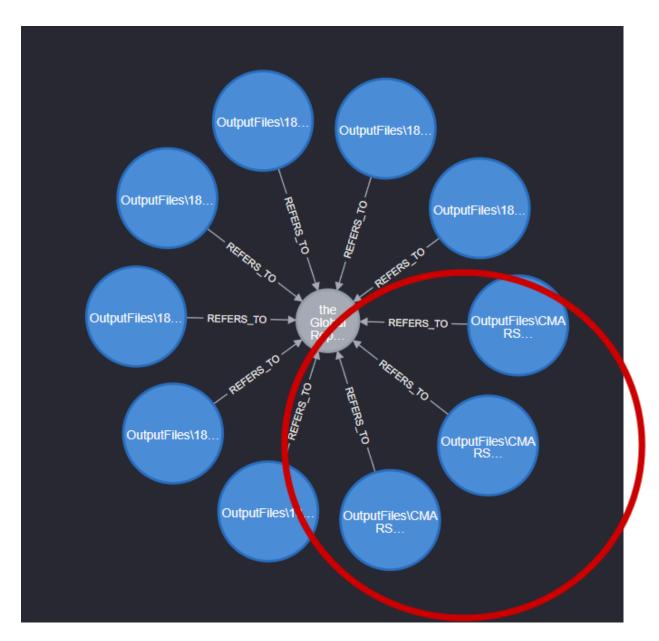

Ook worden images en tables aan pages gelinkt met de -CONTAINS-> relatie.

Geïnterpreteerde structuur: File > nTitle > nSubtitle > nParagraph > nPargraph\_Word

In deze structuur is ook al meteen de link te zien tussen de absolute en de geïnterpreteerde structuur doordat de absolute "blocks" met de geïnterpreteerde elementen worden verbonden.

Deze structuur zal zoals de naam al suggereert een geïnterpreteerde indeling van de PDF volgen. Aan de hand van -BELONGS\_TO-> relaties is te zien hoe de structuur in elkaar zit. De blocks die voorkomen in een geïnterpreteerde node worden ermee verbonden door middel van een -APPEARS\_IN-> relatie zodat de originele structuur achterhaald kan worden.

In deze afbeelding is te zien dat de woorden(de blauwe nodes) verbonden zijn met een -REFERS\_TO-> relatie. Sommige nodes komen uit hetzelfde bestand, maar er is ook te zien dat er enkele verschillen van de rest (zie omcirkelde nodes). Dit betekent dat verwijzingen worden gekoppeld over de hele database. Hierdoor zijn verbanden te leggen tussen bestanden op basis van de entiteiten die naar voren komen uit de tekst

## 3 Coreferencing

Door bij het draaien de coreferencing functie te kiezen. Kan de gebruiker paragraph\_"paragraaf nummer" invullen om zo deze paragraaf contextueel kloppend terug te krijgen. Met contextueel kloppen wordt bedoeld: Verwijzingen van entiteiten zijn vervangen met de entiteiten zelf zodat de lezer het stuk per zin kan gebruiken zonder de gehele context te kennen.

#### Input tekst:

As of 31 December 2017, with approximately € 1,960 bn of assets under management, we are one of the largest asset managers in the world that manage assets by means of active investment strategies. We run our Asset Management business through two distinct invest-ment management units, Allianz Global Investors (AllianzGI) and PIMCO, both of which operate under the umbrella of Allianz Asset Management GmbH (AAM). Particular strongholds include the United States of America, Germany, France, Italy, the United Kingdom and the Asia-Pacific region. As of 31 December 2017, Allianz managed € 1,448 bn in third-party assets. For additional information on our business model, please refer to the Group Management Report of the Allianz Group Annual Report 2017 on our website at The 2017 Non-Financial Report covers the entire Allianz Group

#### **Nieuwe text:**

As of 31 December 2017, with approximately €1,960 in of asset under management, Allianz are one of the largest asset managers in the world that manage asset by means of active investment strategies. Our run Allianz Asset Management business through two distinct investment management units, we Global Investors (Allianz GI) and PICO, both of which operate under the umbrella of we Asset Management GmbH (AAM). Particular strongholds include the United States of America, Germany, France, Italy, the United Kingdom and the Asia-Pacific region. As of 31 December 2017, we managed €1,448 in in third-party assets. For additional information on Allianz business model, please refer to the Group's Management Report of the the Group's Annual Report 2017 on Allianz website at The 2017 Non-Financial Report covers the entire we the Group's

Deze functionaliteit werkt zeker niet perfect, maar werkt voor nu acceptabel.

#### Performance van het model:

Benchmark	F-score
OntoNotes	80.9
LitBank	80.2
PreCo	88.3

#### Opmerkingen:

- De F-score is een maat voor de prestaties van een model op het gebied van coreferentie-identificatie. Een hogere F-score geeft een betere prestatie aan.
- De prestaties van het model op OntoNotes, in een diverse reeks tekstuele contexten.
- De prestaties van het model op LitBank, het aanpakken van coreferentie-resolutie in literaire teksten, waar nuances en complexiteit vaak een uitdaging vormen.

• De prestaties van het model op PreCo, waarbij sprake is van informeel taalgebruik en variabiliteit in de zinsstructuur.
